

What you'll need to create your feature pot

Fantastic Foliage Feature to instantly enliven a dull spot in your garden

Using a large half barrel and a metal obelisk you can create an instant arrangement in any spot of your garden, even where you can't plant into the ground.

We have used **hardy perennial** plants, some evergreen, some dying down for the winter. They all have interesting and contrasting foliage and you should consider their flowers as an added bonus.

They all appear on our **Passionate about Pots** leaflet, pick up your copy in the shop.

We have popped in a clematis to scramble up the obelisk. Choose one from **Pruning Group 3** – these are cut down to 12" (300mm) in March each year so are very easy to look after.

They will perform in your feature for at least two years, just with regular watering and feeding.
