# Grow your sweet peas in a pot this summer

Bring your sweet pea display to where you can see it by growing them in a pot. You can colour coordinate your display by choosing toning or contrasting colours for your pot, painted bamboo canes and plants. Regular feeding, watering and cutting are all essential for success

- wigwam grips
- 6 x 8ft (240mm) bamboo canes
- 12 sweet pea plants – two to each cane
- metal plant rings for support
- 18"-24" pots (450-600mm)
- multipurpose + added John Innes compost with 6" bottom layer of manure
- crocks protecting drainage hole

Sow sweet peas as seeds in grow tubes inside in March/April or buy our young plants from April to May, ready to plant out straight away for the earliest display this summer.
